1. Title of the Invention
Muffler for blowing duct

2. What is claimed is:

A muffler for blowing duct that is provided with a blower for blowing gas and a main blowing duct for guiding the gas output from the blower to a portion to which the gas is supplied, wherein the main blowing duct is divided into a supply-side main blowing duct and a supplied-side main blowing duct,

wherein the supply-side main blowing duct and the supplied-side main blowing duct are linked via a bypass duct, and

wherein the supply-side main blowing duct connects to the bypass duct at a position at least quarter of a wavelength away from where the main blowing duct divides, the wavelength being suitable for muffling.
